Feedback

"Winter sports management in the university of Jyväskylä" erasmus+ experience was great, I have learnt so many new themes and really enjoyed group work, that we did everyday. In groupwork after lectures we generated new ideas and presented them to others. I liked that a lot, also we had many interesting lectures, to learn more about Finland, other cultures, also how winter sports management works. I was happy to try new winter sports, which I did long time ago, so it was a great opportunity to remember them: we did downhill skiing, cross-country skiing and ice skating. The most I liked downhill skiing, we had great instructures, who helped us to learn skiing skills. Also it was interesting to watch ice hockey match and experience finnish sauna. I liked that lectures were combined to winter sports, it was interesting to learn theoretical part in university, do group work and later in the evening to try winter sports by ourselves.

Everything in this erasmus+ was great, actually I can't compare because it was my first time going with studies abroad. But I would like to recommend to have a bit more structure, some people were late everyday to classes like 30 minutes. It disturbed our work, because they were always late and especially to winter olympics activity, we had to wait for them outside and then we started. So maybe it would be a great idea to give them a notice and after few days just not to let to lectures, because I think this is not nice in relation to lecturers, also to other students. Talking about organizing winter sports acitivities, they were nice and fun, but maybe it could be more organized. Maybe to set different time to all students to come to Laajis resort, to register in different time, etc.

Overall this winter sport experience was great and I feel very thankful that I could participate and meet new people, learn new topics about winter sport management.
